#### **Strategy Concepts and Tools**

- Market Demand Analysis
- ✓ Product Life Cycle
- Cost Dynamics

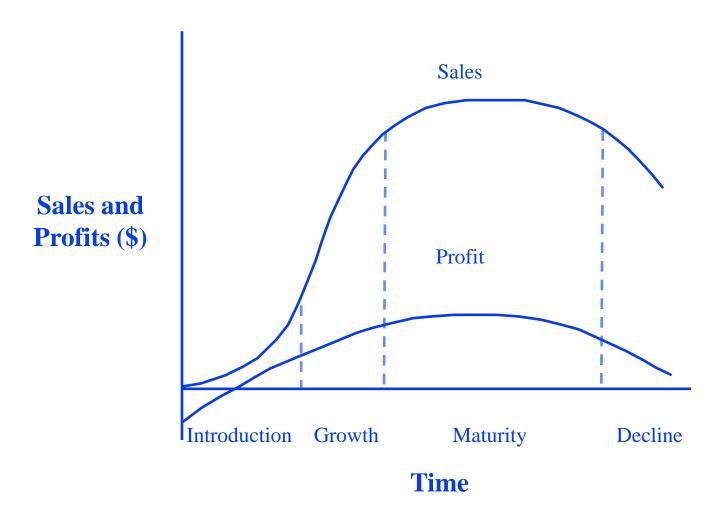

The life-cycle concept comes from:

- •Biological life forms are born, grow, mature, and die.
- •Many human enterprises (like the Roman Empire) have a birth, a heyday, and a decline or death.

Using life cycle concept, the firm tries

- •to recognize distinct phases in the product sales history and its market
- •to **develop strategies** appropriate to those stages products strategy periodically.

Because a product's sales position and profitability can be expected to change over time, the firm needs to revise its strategies.

# Length of Product Life Cycle

•long ... for such commodity items as salt, peanut butter, and wine

•short ... for more differentiated products such as California wine coolers and Darth Vades Halloween masks

# Factors Affecting the Length and Form of Product Life Cycle

- •changing needs and wants
- •changes in technology that lead to close substitutes
- •new product adoption speed in a market

# **Important Aspect of Product Life Cycle**

By using the life cycle,

firms can anticipate

how sales might evolve for a product, and they can develop strategies to influence those sales.

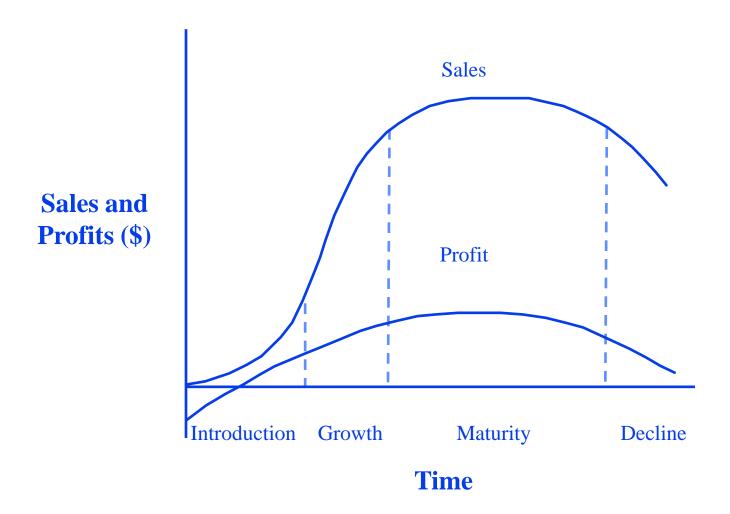

# Strategy example by PLC stage

- •In the <u>introductory stage</u>, the firm should devote considerable resources toward **advertising** to **increase customer awareness** of the new product.
- •In the <u>mature stage</u>, the firm should devote resources to **differentiating** and **positioning** its offering with respect to those of competitors.

### Four Stages of PLC

- •The sales history of a typical product is portrayed as an S-shaped sales curve.
- •This curve is typically divided into 4 stages known as

introduction, growth, maturity, & decline.

## **Introduction Stage**

When the product is introduced in the market, **growth** is **slow**.

The profit curve in this **introduction stage** shows **profits** as **low** or **negative** 

because of the **heavy expenses** of **product introduction**.

## **Growth Stage**

Growth is a period of
rapid market acceptance and
substantial profit improvement..

## **Maturity Stage**

- •Maturity is a period of slowing sales growth because accepted by most of its potential buyers.
- •Profits peak in this period and start to decline because of increased marketing outlays needed to sustain the product's position against competition.

### **Decline Stage**

•Decline is the period when sales show a strong downward drift.

•Profits erode toward zero.

## **Calculating Power Example**

Assume that a human need or want

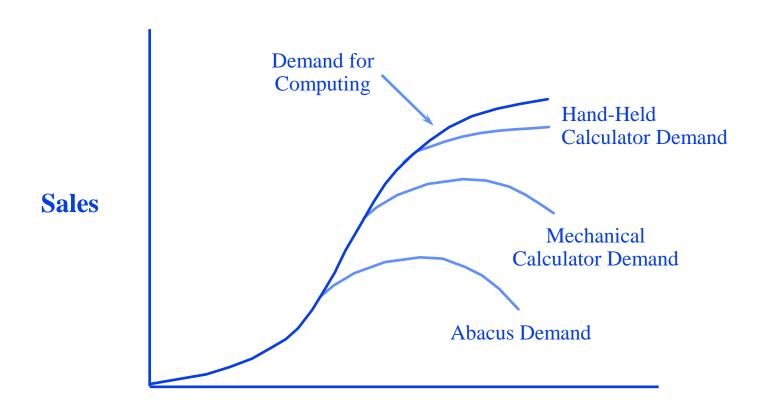

(e.g., calculating power) exists and that a product (e.g., a calculator) satisfies that need.

sequence of technology cycles

within an overall demand cycle

•Next chart shows how different technologies can successively substitute for one another.

## **Technology Substitution**

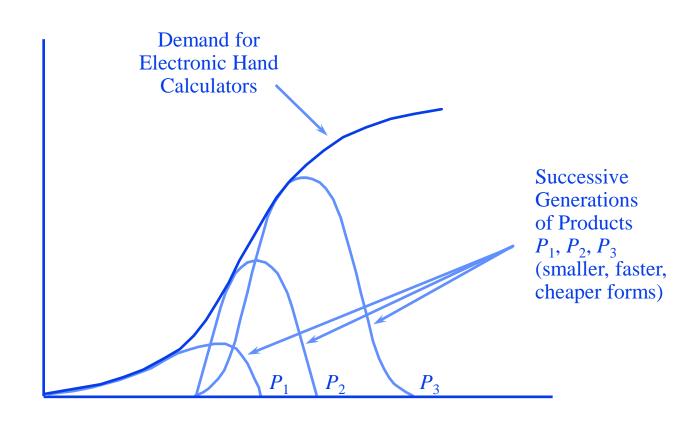

**Time** 

### **Calculating Power Example**

•Next chart breaks things down further, showing how successive product forms can replace one another within the context of a single technology cycle.

## Life Cycles and Product Generations

**Sales** 

**Time** 

# Uneven empirical evidence the existence and applicability of PLC

Rink and Swan (1979) identified 12 types of product life-cycle patterns.

•Cox (1967) studied the life cycles of **754 ethical drug products** and found that the most typical form was a **cycle-recycle pattern**.

He explains that the **second hump** in sales is caused by a **promotional push** during the decline phase.

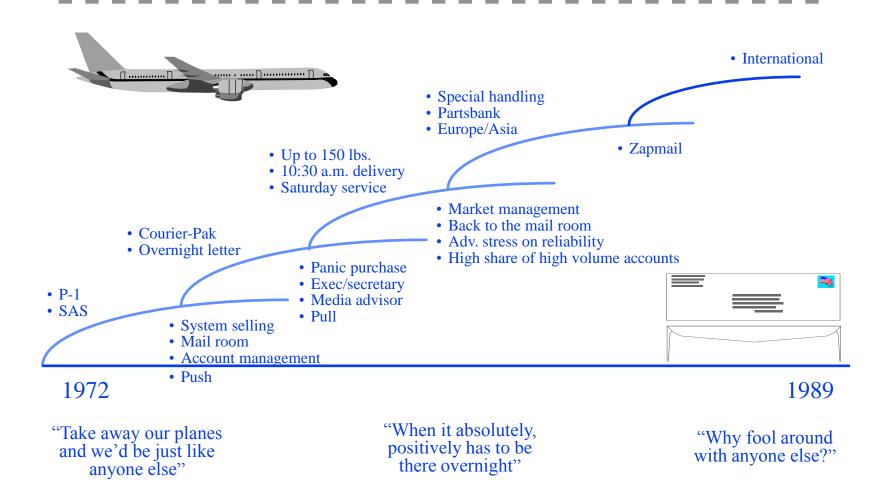

# Uneven empirical evidence the existence and applicability of PLC

•Buzzers (1966) reported a **scalloped life-cycle pattern** 

Exhibit 5.13 represents a succession of life cycles based on

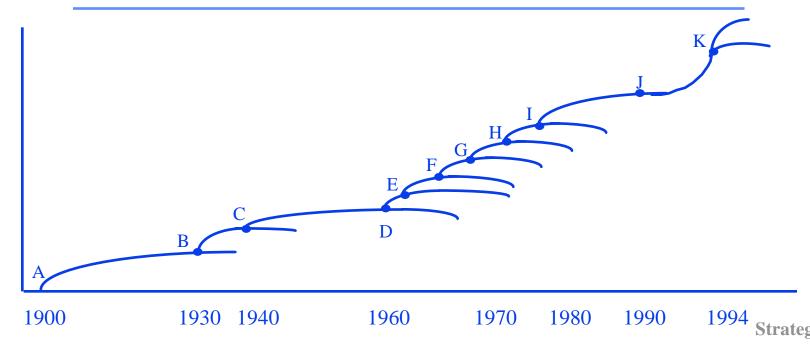

the discovery of new product characteristics, new uses, or new markets.

# Federal Express— Product Life Cycle

# The Life Cycles of Gillette Razor Blades

Blade	Year	Blade	Year
<ul><li>A. Original Gillette blade</li><li>B. Blue blade</li><li>C. Thin blade</li></ul>	1903 1932 1938	G. Platinum-Plus blade H. Trac II I. ATRA	1969 1971 1977
<ul><li>D. Super Blue blade</li><li>E. Stainless Steel blade</li><li>F. Super Stainless Steel blade</li></ul>	1960 1963 1965	J. Sensor K. Sensor Excel	1990 1994

Cum. Sales

#### **Elements to affect PLC**

•Harrell and Taylor (1981) and Thorelli and Burnett (1981) found that

**growth rates** are only **one aspect** of PLC elements.

•market innovation, market concentration, competitive structure, economic cycles, supply constraints, and replacement sales

affect the structure of the life cycle as well.

#### **Elements to affect PLC**

Research results are further confounded by differences in the **level** of **product-aggregation** and by **difficulties** with **new product definition**.

Typically there are three possible aggregation levels:

product class (cigarettes),

product form (plain filter cigarettes), and

**brand** (Philip Morns, regular or nonfilter).

#### **Product classes**

- •Product classes have the longest life histories, longer than particular product forms, and certainly longer than most brands.
- •Many **product classes sales** can be expected to continue in the mature stage for an **indefinite duration** because they are highly related to population (cars, perfume, refrigerators, and steel).

#### **Product forms**

- •Product forms tend to exhibit the standard PLC histories more faithfully.
- Product forms,

such as the dial telephone and cream deodorants,

seem to pass through a regular history of

introduction, rapid growth, maturity, and decline.

#### **Brand's sales history**

- •A brand's sales history can be erratic.
- •This is due to **changing competitive strategies** and **tactics**, which can produce substantial
- **ups and downs** in sales and market shares, even to the extent of causing a mature brand to
  - suddenly exhibit another period of rapid growth.

# Forecasts of stage transitions & phase duration

- •There are two life-cycle problems: the **forecasts** of **stage transitions** and **phase duration**.
- •Lambkin and Day (1989) explicitly develop such a model to describe and explain the product life cycle.

# Forecasting phase change phase length

- •Lambkin and Day (1989) methods and the like **typically rely on data** from one phase to forecast the timing and length of the next stage.
- •Accurate long-range forecasting is quite difficult, and little is known about **the length** and **sequence** of **life-cycle phases** (Day 1981).
- •The problems of **forecasting phase change** and **phase length** are made more difficult by the widely held belief that **life cycles are becoming shorter**.

### Important element of PLC analysis

- •Life-cycle analysis is realistically viewed as only one important element in the overall analysis of marketing opportunities.
- •The life cycle acts as a classification device and suggests conditions under which market growth, for example, may occur.
- During market growth,

competitors are better able to enter the market, and new opportunities for product offerings are available in selected market segments.

### Important element of PLC analysis

- •Price and advertising elasticities change over the product life cycle as well.
- •While there continues to be much discussion concerning definition and measurement,

the **product life cycle** is clearly **critical** in determining appropriate marketing strategies (Thietart and Visas 1984).

# Possible Business Strategies Guiding New Product Development

Source: Booz Allen & Hamilton Inc..

Low Strategy 1–33

#### **SUMMARY**

- •We introduced the **notion of marketing strategy** as an **umbrella concept** within which firms must make marketing decisions.
- •We stressed the **interconnectedness** of all these decisions (particularly functional interactions, synergism between marketing-mix elements, and functional interactions).

#### **SUMMARY**

- To devise a marketing strategy, we must
   define a market appropriately and
   assess and forecast the demand for that market.
- •We outlined the **most common** and **emerging methods of forecasting sales** for <u>established</u> <u>products</u>.

#### **SUMMARY**

- •The structure and dynamics of markets have led marketer to develop two other key planning concepts: the **product life cycle** and **cost dynamics**
- •The **product life cycle** makes using traditional time-series and econometric **forecasting methods difficult**.
